Puzzles/problems/rebuses/curiosities/delusions

An army has besieged a castle. However the keep is also protected by a moat full of water. The army only have two planks which are only a little bit shorter than the moat. How can they use the planks to reach the castle?

Armáda oblehla hrad. Cestu k tvrzi jim ale blokuje vodní příkop. K dispozici mají jen dvě prkna, která jsou ale o trochu kratší než samotný příkop. Jak se mohou dostat na druhou stranu?

SOLUTION

They have to lay one plank across the corner of the moat. This plank can then create a foundation for the other one which can reach the castle safely.

ŘEŠENÍ

Musí položit jedno prkno přes okraj příkopu a druhé prkno přes ně.
